

pHBalance

WE ARE PLEASED TO ANNOUNCE THE INTRODUCTION OF OUR NEW PH BALANCING PRODUCT FOR MUSHROOM CASING.

Proprietary Formulation

WHAT

Fine white powder to be added to peat or casing to increase pH more safely. Works well in conjunction with MycroNutrient.

WHERE

It is applied in peat or ready mixed casing.

WHEN

Added in mixing process or in ready mixed casing at filling shelves.

WHO

Casing company can mix it in or the grower directly.

HOW

Using a casing mixer is best. Simply read off calibration scale current pH and this will give an indication of the dosage needed. Cross check pH after readings have stabilised ie 12-24 hours later.

WHY

MycroNutrient needs an optimum pH of 8 to function at its best. Typically most chalk/lime mixes will only increase pH to 7.2/7.3. pH balance allows you to increase pH more safely past 7.2/7.3.

APPLICATION RATE

Typically 25kg per 1m³ of peat.

PACKAGING

25kg bags - 40 bags per pallet.

IMPORTANT NOTE

Please be aware that the Mycelium grows in a certain range of pH. Please avoid levels over 8.0.
